

FLEA TREATMENT

CLIENT PREPARATION SHEET

Before our arrival please review and complete all the necessary preparations listed below. These steps will ensure that your Technician is able to provide an effective and safe treatment.

How To Prepare For Your Treatment

PETS

- Arrange for your pets (animals) to be treated for fleas before the premises are treated.
- Remove and clean or dispose of all of pet bedding.
- Birds and pets must be removed from the premises for 4 hours. Fish tanks and pumps must be covered and the pumps turned off for 8 hours.

LIVING ROOM, BEDROOMS ETC

- Move small items from the floor and move large items close together in the room so the maximum area can be treated.
- Vacuum all rugs, carpets and upholstered furniture. Special attention must be given to pet resting areas. Vacuum bag should be discarded immediately after vacuuming.
- Mop all tile and vinyl floors; sweep all floors that cannot be mopped.
- Make as much of the floor space accessible by removing all small items from the floor. This includes the bottom of closets and under beds.

After Your Treatment

The products applied will only be effective if the following steps are taken after your home is serviced:

- **DO NOT** use other pest control chemicals (powders or sprays) or cleaning products near areas that have been sprayed, as this will decrease or eliminate the effectiveness of the treatments.
- Avoid waxing or washing floors, especially the edges for at least three weeks after the treatment.
- Because the treatment works best when fleas sense vibration in the room, try not to leave the home unoccupied for any length of time (one to two weeks)
- Vacuum as usual every day for a week after the treatment.
- Expect to see adult fleas for up to one week after the treatment.
- Do not steam clean carpets.

Reminder

It is necessary for you or your pets to leave your home during the treatment and for 4 hours after the treatment. Anyone who has allergies, asthma, is pregnant, children under the age of 4 or anyone with respiratory problems should consult their family doctor where they have concerns regarding the re-entry times. Upon re-entry, open the windows for 20 minutes to properly ventilate the treated rooms.

What You Can Expect From Your Treatment

Your technician will use a variety of methods to control the ants depending on each unique situation. The majority of the treatment will focus on the carpets, baseboards and pet resting areas. All treatments will be made with your safety in mind to ensure your health.
