

SILVERFISH TREATMENT

CLIENT PREPARATION SHEET

Before our arrival please review and complete all the necessary preparations listed below. These steps will ensure that your Technician is able to provide an effective and safe treatment.

How To Prepare For Your Treatment

KITCHEN

No food should be exposed in all areas. Ensure that the kitchen is clean and that food items are sealed in containers.

LIVING ROOM

Move all furniture 2 feet away from the walls. Children's toys should be placed in plastic bags or placed in cupboards.

BATHROOM

Access to all plumbing lines under sinks is required; please have all items in cupboard below the sink cleared out.

GENERAL

In all rooms: move all furniture at least 2 feet away from the wall, heaters and radiators so spray can be applied to baseboard perimeters.

PETS

Birds and Pets must be removed from the premises for 4 hours. Fish tanks and pumps must be covered and the pumps turned off for 8 hours.

STORAGE AREAS

Linen, broom and clothing storage closet floor perimeter areas must be cleared of all items. These items can be placed on the bed.

After Your Treatment

The products applied will only be effective if the following steps are taken after your home is serviced:

- **DO NOT** use other pest control chemicals (powders or sprays) or cleaning products near areas that have been sprayed, as this will decrease or eliminate the effectiveness of the treatments.
- Vacuum after treatment, especially along the baseboards. Use crevice tool to get into corners and cracks.
- Don't create clutter. Keep things neat and tidy.
- Follow the Technician's recommendations for any repairs needed to close entry points.
- Upon re-entry to your home, do not wash any of the baseboards for a period of at least 2 weeks. The pesticide residual effects lessen by washing.
- Wash off kitchen counter tops, bread board, refrigerator and stove tops with soap and water.
- You may put back all kitchen items after the re-entry time as advised by your Technician.

Reminder

It is necessary for you or your pets to leave your home during the treatment and for 4 hours after the treatment. Anyone who has allergies, asthma, is pregnant, children under the age of 4 or anyone with respiratory problems should consult their family doctor where they have concerns regarding the re-entry times. Upon re-entry, open the windows for 20 minutes to properly ventilate the treated rooms.

What You Can Expect From Your Treatment

Your technician will use a variety of methods to control the pest depending on each unique situation. Liquid spray will be used and is the most effective treatment to take control. All treatments will be made with your safety in mind to ensure your health.
